

Vulnerability Assessment Report for a Live Website

Project Title:

Vulnerability Assessment Report for a Live Website

Student Name:

Sravani Yalavarthi

Internship:

Future Interns Cyber Security Internship

1. Introduction:

This report presents a basic vulnerability assessment conducted on a publicly accessible website. The objective is to identify security weaknesses, analyze their impact, and recommend mitigation measures.

2. Target Website:

Website: <https://example.com>

Assessment Date: 01 June 2026

3. Tools Used:

- OWASP ZAP (Passive Scan)
- Browser Developer Tools
- Manual Inspection

4. Findings:

Finding 1: Missing Security Headers

Risk Level: Medium

Description:

The website does not implement some recommended HTTP security headers.

Impact:

Attackers may exploit browser-based vulnerabilities.

Recommendation:

Implement security headers such as:

- X-Frame-Options
- Content-Security-Policy
- X-Content-Type-Options

Finding 2: Information Disclosure

Risk Level: Low

Description:

Certain server information is exposed through HTTP responses.

Impact:

Attackers may gather information about the server environment.

Recommendation:

Disable unnecessary server information disclosure.

5. Risk Summary:

Vulnerability| Risk Level

Missing Security Headers| Medium

Information Disclosure| Low

6. Recommendations:

1. Implement proper security headers.
2. Regularly perform vulnerability scans.
3. Keep software and plugins updated.
4. Monitor logs and security events.

7. Conclusion:

The assessment identified a few security weaknesses that should be addressed to improve the overall security posture of the website.

Implementing the recommended controls will reduce potential risks and strengthen website security.
